

iCapta ScanLog

ScanLog is a dynamic version of DMS, thanks to which you have control over your documents and their content during digitization

- ✔ **Auditability of the processing process at each stage**
- ✔ **Option to set roles for processors**
- ✔ **Possibility of entering documents for express processing**
- ✔ **Quick access to images of digitized documents**

What can ScanLog do?

Register and record the document according to the ID

Inform about the storage of the document, its status and location

Record the processes of the document and its creation

Check users who performed individual processes

And much more...

Web application operated on the Provider's infrastructure for an authorized set of users.

Users have online access and are thus able to monitor the status of document processing in the entire process, in real time, including the possibility to display processing statistics.

With the use of ScanLog services, you get an unlimited number of user accesses for monitoring your documents, operations and workers

We offer ScanLog as an optional part of our digitization services or as a solution delivery.
